Release Notes

Update: Jan 31, 2018

Name

ADM 3.0.5.RDU1

Installation Notes

- No matter if you decide to upgrade ADM or not, it is still recommended that you should back up all data on your NAS.
- After upgrading, unable to update firmware to a previous version of ADM 3.0 and ADM 2.7.
- After upgrading to ADM 3.0 official, some apps will be disabled because of incompatibility. Please update these apps to latest version at App central. After you upgrade those apps, you should be able to use them (make sure those apps are enable too).DataSync for hubiC for ADM 3.0 are still in beta, please go to ADM\App Central\Beta Apps to download and install.
- When performing a system migration from a newer version of ADM to an older version of ADM, please be sure to upgrade the destination NAS with latest version of ADM after system migration completes.

What's New?

(since ADM 3.0.4.RCQ1)

- Now supports TL-WN722N v2 wifi dongle
- Added Linux KPTI patch for Meltdown CPU vulnerability for AS3100, AS3200, AS5000, AS5100, AS6100, AS6200, AS6300, AS6400 and AS7000 series

Change Log

- Added exFAT support to MyArchive drives for NAS that have the exFAT driver installed
- Updated multilingual strings
- Fixed issue "When installing App from App Central, the App name is not correct"
- Fixed issue "Unable to mount the selected ISO files to a virtual drive"
- Fixed issue "EZ-Connect is unable to enable Cloud ID"
- Fixed compatibility issue with Chrome 64.0.3282.119
