

## Release Notes

**Update:** Jun. 16, 2015

### Name

ADM 2.4.2.RIG1

### Installation Notes

- This is the software for the AS70xx series. No matter if you decide to upgrade ADM or not, it is still recommended that you should back up all data on your NAS.

### What's New?

- Supports D-Link DWA-182 (802.11ac WiFi Dongle)
- Supports Intel I210 Gigabit Network Interface Card for AS70 series
- Adds "Time" column in "Network Defender" > "Auto Black List" to show when an IP is blocked

### Change Log

- Fixed "incorrect symbolic links in /usr/lib64" issue
- Fixed "incorrect time zone display" issue
- Disables ssh connection by default
- Fixed "e-mail notification does not work when ADM language is set to French" issue
- Fixed "Amazon S3 upload error message is not recorded in NAS log" issue
- Fixed "cannot use SAMBA to copy data to NAS if the source folder contains "thumbs.db" file" issue
- Fixed "Certificate Manager reports error when FTP is disabled" issue
- Changed SSL cipher suite to enhance web server security
- Fixed "schedule backup fails if the destination is set to external drive" issue
- Fixed "the maximum subfolder number within a share is 64998" issue
- Fixed "the maximum size that can be shared in a single share link is 2GB" issue
- Fixed "the Logitech Bluetooth keyboard K811 fails to connect" issue
- Fixed "Wake on LAN does not work on AS-2/3 series" issue
- Fixed "with EuP enabled, AS-2/3 series cannot obtain IP from DHCP server after restart" issue

### Known Limitations/Issues

N/A
